

SECURE, EFFICIENT, AUTOMATIC COST EFFECTIVE ONLINE BACKUP

DXI's Backup service is ideal for businesses that are looking for a more efficient, reliable and secure way to backup and recover its critical data. DXI Online Backup, powered by Attix5, is ideal for Windows environments and DXI Enterprise Online Backup, powered by Asigra, is ideal for larger, mixed O/S environments. All the data is stored on fault tolerant servers in our remote data centre and is mirrored to our secondary data centre every 15 minutes.

DXI Backup offers the following features:

- **Automatic** – Define a data backup policy, set a schedule and it runs automatically in the background.
- **Secure** – Utilises 128 bit, 256 bit and 448 bit encryption.
- **Efficient** – After the first backup, which can be performed over the Internet, or by a portable file server, only the daily changes are backed up.
- **Speed of recovery** – As the data is stored on disk, rather than tape, data can be restored immediately. A local copy option is available.
- **Centralised control** – Backup and restore management and monitoring for all central and distributed servers.
- **Self-service recovery** – Users can recover their own lost files without calling the central helpdesk.
- **Easy to use** – Simple to use Graphical User Interface (GUI).
- **Long term archiving option** – Month-end archives can be run onto tape for long term storage.

DXI Backup provides the following benefits over tape-based systems:

1. Shorter backup window.
2. No human intervention.
3. Reduced Mean Time to Recover.
4. Meets highest standards of data security
5. Meets Regulatory/Compliance requirements

Onsite/offsite options delivers increased flexibility

All the above services are delivered from DXI's secure data centres and utilise DXI's high speed, ultra reliable network infrastructure which has direct connections to Multiple Tier 1 Internet backbone providers.
